

Features and Benefits

- The control circuit and the LED share the only power source.
- Control circuit and RGB chip are integrated in a package of 5050 components, to form a complete addressable pixel.
- Built-in signal reshaping circuit, after wave reshaping to the next driver, ensure wave-form distortion not accumulate.
- Built-in electric reset circuit and power lost reset circuit.
- Each pixel of the three primary color can achieve 256 brightness display, completed 16777216 color full color display, and scan frequency is of 2KHz.
- Cascading port transmission signal by single line.
- Any two point the distance not more than 5m transmission signal without any increase circuit.
- When the refresh rate is 30fps, cascade number are not less than 1024 pixels.
- Send data at speeds of 800Kbps.
- The color of the light is highly consistent, cost-effective.
- No need for external electric components and even the capacitor.

Applications

- Full-color module, LED full-color soft/hard light bar, LED guardrail tube.
- LED decorative lighting, LED Screen, Indoor/outdoor LED video irregular screen, various electronic products, electrical equipment marquee.

General description

WS2812B is a intelligent control LED light source that the control circuit and RGB chip are integrated in a package of 5050 components. It internal include intelligent digital port data latch and signal reshaping amplification drive circuit. Also include a precision internal oscillator and a voltage programmable constant current control part, effectively ensuring the pixel point light color height consistent.

The data transfer protocol use single NZR communication mode. After the pixel power-on reset, the DIN port receive data from controller, the first pixel collect initial 24bit data then sent to the internal data latch, the other data which reshaping by the internal signal reshaping amplification circuit sent to the next cascade pixel through the DO port. After transmission for each pixel, the signal to reduce 24bit. pixel adopt auto reshaping transmit technology, making the pixel cascade number is not limited the signal transmission, only depend on the speed of signal transmission.

RESET time > **280μs**, it won't cause wrong reset while interruption, it supports the lower frequency and inexpensive MCU.

Refresh Frequency updates to **2KHz**, Low Frame Frequency and No Flicker appear in HD Video Camera, it improve excellent display effect.

LED with low driving voltage, environmental protection and energy saving, high brightness, scattering angle is large, good consistency, low power, long life and other advantages. The control chip integrated in LED above becoming more simple circuit, small volume, convenient installation.

Mechanical Dimensions

Remarks: Dimension of 5.0*5.4*1.57mm, default Tolerance of 0.05mm.

PIN Configuration

PIN Function

| NO. | Symbol | PIN | Function description |
|-----|--------|--------------|-------------------------------|
| 1 | VDD | POWER SUPPLY | Power supply |
| 2 | DOUT | DATA OUT | Control data signal output |
| 3 | VSS | GROUND | Ground,data & power grounding |
| 4 | DIN | DATA IN | Control data signal input |

Absolute Maximum Ratings

| Parameter | Symbol | Ratings | Unit |
|-----------------------|----------|-------------------------|------|
| Power supply voltage | V_{DD} | +3.7~+5.3 | V |
| Logical Input Voltage | V_I | VDD-0.3V~VDD+0.7 | V |

Electrical Characteristics ($T_A=25^\circ\text{C}$, $V_{DD}=5\text{V}$, $V_{SS}=0\text{V}$, unless otherwise specified)

| Parameter | Symbol | Min | Tpy | Max | Unit | Conditions |
|--------------------|----------|-------|-----|----------|------|-----------------------|
| Input current | I_I | — | — | ±1 | μA | $V_I=V_{DD}/V_{SS}$ |
| High Voltage Input | V_{IH} | 2.7V | — | VDD+0.7V | V | D _{IN} , SET |
| Low Voltage Input | V_{IL} | -0.3V | — | 0.7V | V | D _{IN} , SET |

Switching Characteristics (T_A=25°C, V_{DD}=5V, V_{SS}=0V, unless otherwise specified)

| Parameter | Symbol | Min | Typ | Max | Unit | Condition |
|-------------------------|------------------|-----|-----|-----|------|----------------------------|
| Transmission delay time | t _{PLZ} | — | — | 300 | ns | CL=15pF, DIN→DOUT, RL=10KΩ |
| Fall time | t _{THZ} | — | — | 120 | μs | CL=300pF, OUTF/OUTG/OUTB |
| Input capacity | C _I | — | — | 15 | pF | — |

LED Characteristics

| Parameter | Symbol | Color | Quiescent Current: 0.6mA | | | | Condition (Working current) |
|------------|--------|-------|--------------------------|-----|------|------|--------------------------------|
| | | | Mini | Typ | Max | Unit | |
| Brightness | IV | Red | 300 | 310 | 500 | mcd | 12mA |
| | | Green | 600 | 780 | 1000 | | |
| | | Blue | 200 | 215 | 300 | | |
| Wavelength | λd | Red | 620 | 621 | 630 | nm | 12mA |
| | | Green | 515 | 520 | 525 | | |
| | | Blue | 465 | 471 | 475 | | |

Data Transfer Time

| | | |
|-----|------------------------------|------------------|
| T0H | 0 code, high voltage time | 220ns~380ns |
| T1H | 1 code, high voltage time | 580ns~1μs |
| T0L | 0 code, low voltage time | 580ns~1μs |
| T1L | 1 code, low voltage time | 580ns~1μs |
| RES | Frame unit, low voltage time | >280μs |

Sequence Chart

Cascade Method

Data Transmission Method

Note: The data of D1 is send by MCU, and D2, D3, D4 through pixel internal reshaping amplification to transmit.

Composition of 24bit Data

| | | | | | | | | | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| G7 | G6 | G5 | G4 | G3 | G2 | G1 | G0 | R7 | R6 | R5 | R4 | R3 | R2 | R1 | R0 | B7 | B6 | B5 | B4 | B3 | B2 | B1 | B0 |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|

Note: Data transmit in order of GRB, high bit data at first.

Typical Application Circuit: No need extra filter capacitor in PCB layout

Packing Standard

Top SMD LED Using Instructions

1. Summary

To make the best use of WORLDSEMI's LED, please refer to the below precautions, they are of same usage method as other electronic components.

2. Cautions

2.1. Dust & Cleaning

The surface of the LED is encapsulated with modified epoxy resin because it plays a very good role in protecting the optical performance and aging resistance. The modified epoxy resin is easy to stick with dust and must be kept clean. When there's a certain amount of dust on the surface of the LED, it won't affect brightness, but dust proof should be taken care of. Promoting the use of unsealed package in preference to others and the assembled LEDs should be placed in a clean container.

Avoid using the organic solvents to clean the dust on the LED surface and it's necessary to confirm whether the cleaning fluid will dissolve the LED.

Do not clean the LEDs by the ultrasonic. Some parameters affecting the LED performance must be evaluated if have no alternative but to the ultrasonic cleaning method, such as ultrasonic power, baking time and assembly conditions, etc.

2.2. Moisture-proof packaging

TOP SMD LEDs are moisture sensitive components. LEDs are packaged in aluminum foil bag to prevent the from absorbing moisture during transport and storage. A desiccant is placed in the bags to absorb moisture. If the LED absorbs moisture, then it evaporates and expands when in reflow process, which may break the colloid from the bracket and damage the optical performance of LED. For this reason, moisture-proof packaging is to prevent the from absorbing moisture during transport and storage. The moisture resistance rating of WORLDSEMI's LED is: **LEVEL 5a**.

Tabel I - IPC/JEDEC J-STD-020 Moisture/Reflow Sensitivity Classification

| MSL Level | Workshop Life | |
|-----------|------------------------------|-------------|
| | Time | Conditions |
| LEVEL1 | Unlimited | ≤30°C/85%RH |
| LEVEL2 | 1 Year | ≤30°C/60%RH |
| LEVEL2a | 4 Weeks | ≤30°C/60%RH |
| LEVEL3 | 168 Hours | ≤30°C/60%RH |
| LEVEL4 | 72 Hours | ≤30°C/60%RH |
| LEVEL5 | 48 Hours | ≤30°C/60%RH |
| LEVEL5a | 24 Hours | ≤30°C/60%RH |
| LEVEL6 | Take-out and Use immediately | ≤30°C/60%RH |

2.3. Management after unpacking

- (1) Please use the LED under the condition of “T<30°C, RH<60%”.
- (2) Use up within 24 hours after removing the packages.
- (3) We would recommend to do dehumidification if they exceed the valid storage period of products or dampened due to other reasons.

2.4. Dehumidification Operation (Non-leakage of air, baking temperature: 70°C-75°C)

3. Management of secondary SMT process

It's necessary to do moisture-proof treatment when the secondary reflow carried out that followed the first reflow. Exposed at condition of “<30 °C/60% RH”, it is recommended to pass the secondary reflow within 2 hours; It can't be more than 2 hours to be exposed at condition of “<30°C/60%RH” and dehumidification operation is requested for a longer interval reflow. For instance, place in a drying box or a container with desiccant, and dehumidify it before the secondary reflow (Low temperature baking operation: **70°C-75°C, ≥12 hours**). For exposure to “< 30 ° C / 60% RH” more than 12 hours after one welding, can't pass the second secondary reflow.

4. SMT Reflow

Refer to the parameters listed below, the experimental results prove that the TOP SMD LED meets the JEDEC J-STD-020C standards. As a general guideline, it is recommended to follow the SMT reflow temperature curve recommended by the solder paste manufacturer.

| Curve Description | Lead-free |
|---|-----------|
| The lowest preheat temperature (T _{smi} n) | 150°C |
| The highest preheat temperature (T _{sm} a)x) | 200°C |
| Preheating time (T _{smi} n to T _{sm} a)x) (ts) | 60-180 S |
| Average rate of temperature rise (T _{sm} a)x to T _p) | <3°C/S |
| LIQUID REGION temperature (T _L) | 217°C |
| LIQUID REGION Holding Time (t _L) | 60-150 S |
| Peak Temperature (T _p) | 240°C |
| High Temperature Region(T _p -5°C) Holding | <10 S |
| Cooling Rate | <6°C/S |
| Room Temperature to Peak Holding Time | <6 min |

Remarks: 1. These general guidelines may not apply to all PCB designs and reflow soldering configurations.

2. All temperatures referred are measured on the surface of the package body.

5. Assembly Precautions

| | | | |
|---|--|--|---|
| 1. Clip the LED from its side. | 2. Neither directly touch the gel surface with the hand or sharp instrument, it may damage its internal circuit. | 3. Not to be double stacked, it may damage its internal circuit. | 4. Can not be stored in or applied in the acidic sites of PH<7. |
